## SKILLS

JavaScript, Python, C#, Java
Git, SQL & NOSQL Databases

## Extra-Curricular

### FreakyOS

After-market highly customized Android platform to enhance the stock Android experience.

### Music & Yoga

## PROJECTS

**Hack[in],** An online game for users across the world designed for an inter college event. It is implemented using the MERN stack and runs on AWS.

**ScrapeIt,** A python scrapy application. The spider searches for the products of that particular brand in popular e–commerce websites and renders the details of the products.

**AReco,** a project recommendation system built using Neo4j. This application recommends a project that collaborates students with similar interests.

**FiperShare,** a python based centralized peer to peer file sharing system. This application can share files of any format as bytes of data. It has made efficient use of socket programming and multithreading.

## LANGUAGES

English, Tamil, Telugu
